

# Your Organizational Reflection

AI Startup Simulation · 7/7/2026

## ✅ What you understood well

You showed strong instincts around identifying clear primary owners for tasks, sequencing how work moves between teams, recognizing when a problem needs more than one team. These are foundational skills for thinking like someone who understands how organizations actually operate.

## ⚖️ Where you over-assigned responsibility

You generally avoided over-assigning responsibility — you tended to involve teams that were actually necessary rather than adding people "just in case."

## 👉 Where collaboration could improve

Your team assignments closely matched real-world patterns — you're already thinking about who needs to be in the loop, not just who fixes the bug.

## 💡 What surprised you

You may have noticed that even "simple" tickets pass through more hands than expected before reaching the customer again.

*"Throughout this simulation, you consistently identified clear ownership before involving additional teams. Your collaboration choices showed strong systems thinking. Real organizations work best when ownership is clear and teamwork supports — not replaces — that ownership."*

**Key takeaway:** *Clear ownership usually improves speed more than adding more people.*
