Chapter 1 — Decision Style

Analytical Thinker

Chapter 2 — Top Priorities

Security, Accuracy, Stability

Chapter 3 — Decision Sequence

Research → Reflect → Observe → Discuss

Overall Reflection: Your choices consistently show a preference for structured decision-making. Across scenarios, priorities, and sequencing — starting with "Research" and ending with "Review" — you tend to value evidence before action and rarely make impulsive decisions. As a Analytical Thinker, this pattern showed up most clearly in high-pressure, time-sensitive conditions.

Reflection Journey

Your dominant thinking style across every session played so far, in order.

Session 1 •  Calm

Analytical Thinker

Score 85/100

Session 2 •  Stress

Analytical Thinker

Score 92/100

Calm vs Stress Comparison

People often notice that under stress they rely more on intuition or fast action, while calm situations allow for deeper reflection. Replay in the opposite mode to compare your own patterns.

Last Session

 Calm Mode

Analytical Thinker	70%
Emotional Intuitive	20%
Overthinking Loop	0%
Action-First Decision Maker	10%
Balanced Reflective Thinker	0%

 Stress Mode

Analytical Thinker	50%
Emotional Intuitive	0%
Overthinking Loop	30%
Action-First Decision Maker	20%
Balanced Reflective Thinker	0%

Interesting Observation

- Decision speed stayed about the same as last session
- Choices were more **action-oriented** than before
- A bit more second-guessing crept in this time

Interestingly, pressure seems to intensify your tendency to second-guess rather than speed you up.

Personalized Observations

- You usually prefer gathering enough evidence before committing to a choice.
- You naturally circle back to review outcomes after a decision is made.
- You may notice yourself replaying decisions longer than the situation strictly requires.
- Stability and security consistently rank high in what you optimize for.
- You tend to commit to decisions quickly once you have the essentials.
- Your thinking pattern shifts slightly depending on context — that flexibility is itself a pattern worth noticing.

Biggest Strength

Clear, evidence-based reasoning under complexity.

Blind Spot to Watch

May delay action while waiting for 'enough' data.

Three Practical Habits

- Set a 'good enough' data threshold before deciding.
- Timebox research phases.
- Pair with an intuitive thinker for balance.
